# Excercises

1) **Prove that:** A Y-monotone polygon has one top vertex, and one bottom vertex.

2) **Prove that:** A polygon is Y-monotone if and only if it doesn't have a split vertex.

Excercises

1) Prove that: A Y-monotone polygon has one top vertex, and one bottom vertex.

2) Prove that: A polygon is Y-monotone if and only if it doesn't have a split vertex.

3) Prove or disprove: Given any set of **disjoint** line segments, we can always connect their end points in such a way that the result shape is a simple polygon.

Excercises

1) Prove that: A Y-monotone polygon has one top vertex, and one bottom vertex.

2) Prove that: A polygon is Y-monotone if and only if it doesn't have a split vertex.

3) Prove or disprove: Given any set of **disjoint** line segments, we can always connect their end points in such a way that the result shape is a simple polygon.

# Excercises

1) Prove that: A Y-monotone polygon has one top vertex, and one bottom vertex.

2) Prove that: A polygon is Y-monotone if and only if it doesn't have a split vertex.

3) Prove or disprove: Given any set of **disjoint** line segments, we can always connect their end points in such a way that the result shape is a simple polygon.

4) Prove or disprove: Given any set of points, we can always connect them to make a simple polygon.

Excercises

1) Prove that: A Y-monotone polygon has one top vertex, and one bottom vertex.

2) Prove that: A polygon is Y-monotone if and only if it doesn't have a split vertex.

3) Prove or disprove: Given any set of **disjoint** line segments, we can always connect their end points in such a way that the result shape is a simple polygon.

4) Prove or disprove: Given any set of points, we can always connect them to make a simple polygon.
